

AI

AUTONOMOUS BUSINESS ANALYST

From business questions to evidence-backed decisions

Presented by Sneha & her sister

GREAT AGENT HACKATHON 2026

THE PROBLEM

Getting an answer from your data still takes hours of manual work

“ *Why did our revenue drop 18% last month?* ”

Today, an analyst manually works through each of these steps:

Query sales data

Check customer churn

Review regional
performance

Investigate inventory

Hours later — compile it all

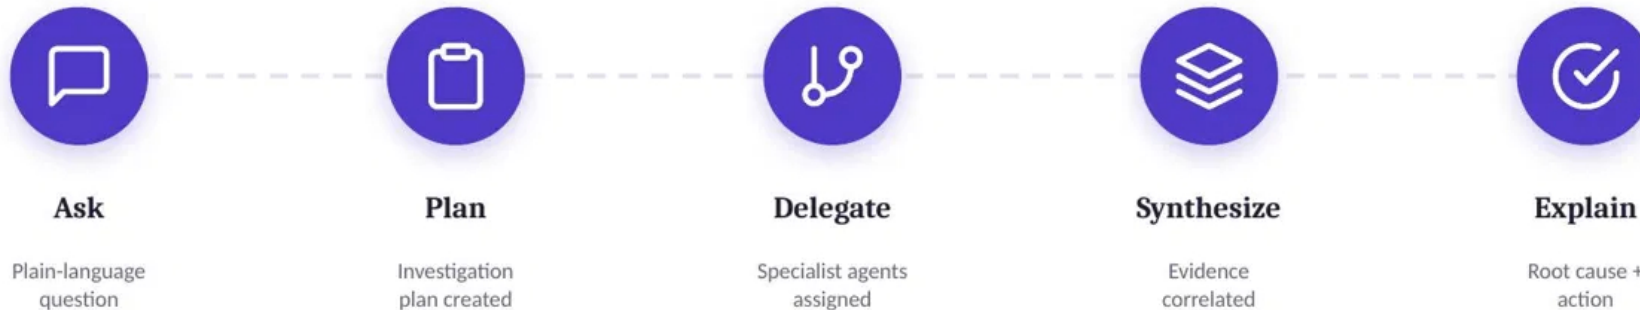

We thought —

**what if an AI system could actually
investigate that question on its own?**

THE SOLUTION

Autonomous Business Analyst investigates the way an analyst would

Instead of answering like a chatbot, it plans the investigation, decides what it needs, and delegates the work.

The system can adapt mid-investigation — if one signal points somewhere new, it digs deeper there.

THE AGENTS

Specialized agents, working in parallel

Sales Agent

Investigates revenue and product-level performance to find where the decline started.

Customer Agent

Looks at churn and regional patterns to see who's leaving, and from where.

Finance Agent

Analyzes margins and order value to check if the cause is cost or pricing.
